

IF YOU WOULD LIKE TO LEARN MORE ABOUT EMBRYO STORAGE, CONTACT US AT (800) 489-2294 OR WWW.CRYOLAB.COM.

## ABOUT US

Cryogenic Laboratories, Inc. was established in 1971 as the first private sperm bank in the country. Since then, CLI has remained at the forefront of the field by researching, developing, and refining the means to protect, freeze, and store specimens for future use. In fact, we have been transporting frozen specimens to and from physician practices in all 50 states and many international countries for over 30 years. At CLI, we are grateful for the opportunity to share our expertise and help people build families of their own.

## CREDENTIALS

*Cryogenic Laboratories, Inc. is:*

- A member of the American Society for Reproductive Medicine (ASRM)
- An accredited and inspected member of American Association of Tissue Banks (AATB)
- Inspected and licensed by the New York State Department of Health
- Licensed by the States of Maryland & California
- In compliance with guidelines established by the FDA regarding storage of reproductive tissue

## EMBRYO STORAGE AT CRYOGENIC LABORATORIES

If you have embryos remaining from in vitro fertilization (IVF) treatment, you may want to store them for possible future use. With the rapid advances in reproductive medicine, cryopreserved or frozen embryos can potentially remain viable for an indefinite period of time.

Pregnancies with good outcomes have been reported following thawing and transfer of embryos frozen for over a decade. Hundreds of healthy babies conceived from frozen embryos are born every year and the numbers continue to increase.

### CONSIDER LONG-TERM STORAGE IF:

- Your fertility center restricts how long they offer storage privileges
- Your fertility center has limited storage space
- Your fertility center is closing

### HOW EMBRYO STORAGE WORKS

Embryos are transferred in our special liquid nitrogen vapor shippers by highly reliable overnight air couriers to assure safe delivery and maintenance of appropriate storage temperature during transport. Documentation verifying transfer of specimens follows each shipment.

Embryos are then stored under optimal conditions for as long as you desire. You can request that your embryos be shipped to a fertility center of your choice at any time. With more than 30 years experience in transporting and storing frozen reproductive specimens, you can trust that your embryos will be cared for safely.

### AFFORDABILITY

Storage fees are assessed per storage client, regardless of the number of embryos being stored. Please visit our website ([www.cryolab.com](http://www.cryolab.com)) for a complete list of storage and shipment fees. We offer monthly storage rates and increasingly discounted rates for longer term contracts (one, two, and five year terms). Shipping fees may be reduced if your fertility center arranges for multi-patient shipments of embryos to our facility.

### SAFETY

Our facility is equipped with the latest technology. Embryos are stored in vapor phase liquid nitrogen tanks that are not dependent on electricity. This cutting edge technology allows specimens to be stored in the vapor phase 100% of the time. Our storage tanks are monitored 24 hours a day, seven days a week. The safekeeping of your embryos for many years is completely assured.

### CONVENIENCE

- Affordable storage fees with monthly and discounted long-term storage options
- Convenient credit card billing system for payment
- Direct contact regarding transfer and disposition of your embryos
- Expandable storage systems to handle frozen samples in all types of packaging (vials, straws, ampules)

GETTING STARTED IS AS EASY AS COMPLETING A SIMPLE EMBRYO STORAGE CONTRACT. CONTACT US AT (800) 489-2294 OR [WWW.CRYOLAB.COM](http://WWW.CRYOLAB.COM).
